

Logic Building Assignment : 3

Complete below code snippets it contains only service provider function.
Write entry point function to call below helper functions separately.

1. Write a program which accept one number from user and print that number of even numbers on screen.

Input : 7

Output: 2 4 6 8 10 12 14

```
void PrintEven(int iNo)
```

```
{
    if(iNo <= 0)
    {
        return;
    }
    // Logic
}
```

```
int main()
```

```
{
```

```
    int iValue = 0;
```

```
    printf("Enter number\n");
```

```
    scanf("%d",&iValue);
```

```
    PrintEven(iValue);
```

```
    return 0;
```

```
}
```

2. Write a program which accept number from user and print even factors of that number.

Input : 24

Output: 1 2 4 6 8 12

```
void DisplayFactor(int iNo)
```

```
{
```

```
    int i = 0;
```

```
    if(iNo <= 0)
```

```
    {
```

```
        iNo = -iNo;
```

```

    }

    for(i = 1; i<= __ ;i++)
    {
        if(_____)
        {
            print("%d",i)
        }
    }
}

int main()
{
    int iValue = 0;

    printf("Enter number\n");

    scanf("%d",&iValue);

    DisplayFactor(iValue);

    return 0;
}

```

3. Write a program which accept number from user and print even factors of that number.

Input : 36

Output: 2 6 12 18

```

void DisplayEvenFactor(int iNo)
{
    int i = 0;

    if(iNo <= 0)
    {
        iNo = -iNo;
    }

    for(i = 1; i<= __ ;i++)
    {
        if(____&&____)
        {
        }
    }
}

int main()

```

```
{
    int iValue = 0;

    printf("Enter number\n");

    scanf("%d",&iValue);

    _____ ( _____ );

    return 0;
}
```

4. Accept one character from user and convert case of that character.

Input : a Output : A

Input : D Output : d

```
_____ DisplayConvert ( _____ CValue)
{
    if( _____ )
    {
        printf(" %c ", _____);
    }
    else if( _____ )
    {
        printf(" %c ", _____);
    }
}

int main()
{
    char cValue = '\0';

    printf("Enter character\n");

    scanf("%c",&cValue);

    _____ (cValue );

    return 0;
}
```

5. Accept on character from user and check whether that character is vowel (a,e,i,o,u) or not.

Input : E Output : TRUE

Input : d Output : FALSE

```
typedef int _____ ;

# define TRUE _____
# define _____ 0

_____ ChkVowel ( char _____)
{
    if(_____)
    {
        _____
    }
    else
    {
        return FALSE;
    }
}

int main()
{
    char cValue = '\0';
    BOOL bRet = FALSE;

    printf("Enter character\n");
    scanf("%c",&cValue);

    bRet = _____ (cValue );

    if (bRet == _____)
    {
        printf("It is Vowel");
    }
    else
    {
        printf("It is not Vowel");
    }

    return 0;
}
```
